

SCIENCE CAFÉ – Ecological Studies of MYXOMYCETES at Big Thicket

THICKET OF DIVERSITY— AN ALL TAXA BIODIVERSITY INVENTORY

The Big Thicket Association and Big Thicket National Preserve announce a Science Café on Myxomycetes (slime molds) of Big Thicket. Held at the Logon Café, 385 Calder, Beaumont, Texas. **Katherine Winsett, PhD, of the University of Arkansas**, will share a short power-point presentation about this very exciting organism, followed by a brief discussion period.

“Working to understand the ecology, systematics and evolution of myxomycetes, dictyostelids and protostelids — the true slime molds.”

Science cafés began in Europe in the early 1990’s. The intent was to offer a relaxed public forum for the exchange of ideas in a friendly setting where anyone could come and sharpen their knowledge of the modern sciences. Today science cafés are held around the world as venues for scientists and other experts to give short public presentations followed by open discussion. **Science Cafés are free, conducted in a relaxed forum, and require no reservation.**

**MONDAY,
NOVEMBER 15,
2010**
